SUBJECT: Dual High Pressure Oxygen Gage

As a result of the conference held last month we are submitting two (2) copies of a proposed dual oxygen gage for your evaluation, P/N DN 228 02-1.

As you will note the gage face is shifted to provide better readability in the ranges where it is most necessary (i.e., first quarter of mission). Whereas the present gage is a direct reading instrument, this proposed system is an electrical unit, requiring a transmitter and an indicator as shown on the drawing.

Your comments on this matter will be appreciated.

Very truly yours,
